

Examples of packages to purchase with the Digital Devices grant

The Digital Devices grant enables Network Partners to purchase devices and internet connections to loan to learners that don't yet have a device of their own. Each device must have its own internet connection as learners may not have this either. Below are some examples of devices you can purchase with the Digital Devices grant. Some devices have their own inbuilt sim card slot for you to put a prepaid sim into, others will require the purchase of a Wi-Fi hotspot to enable your learners to connect to the internet.

The examples below are only a small selection of combinations of devices and plans available and are in no way a recommendation or endorsement by Good Things Foundation. It is recommended that you conduct your own research to find the most suitable devices and data plans for your community. Grant applications will be assessed on demonstrating good value for money, so please consider this when undertaking your research.
